

Find the general solution for  $y$ :  $\frac{dy}{dx} = \frac{e^{-x} - y}{x}$ . [104 北科大化工 1(b)]

$$[\text{解}] \text{原式} \Rightarrow xy' = e^{-x} - y \Rightarrow y' + \frac{1}{x}y = \frac{e^{-x}}{x}$$

$$F = e^{\int \frac{1}{x} dx} = e^{\ln x} = x$$

$$y = \frac{1}{F} \left( \int F \cdot \frac{e^{-x}}{x} dx + C \right) = \frac{1}{x} \left( \int e^{-x} dx + C \right) = \frac{1}{x} (-e^{-x} + C)$$
